

This event is

**bullfrogpowered**[™]

with 100%
green electricity.

Who is Bullfrog Power?

Bullfrog Power is a leading Canadian supplier of carbon-free electricity.

What does it mean to be bullfrogpowered?

This event is bullfrogpowered with 100% green electricity. That means Bullfrog Power will inject green power onto the Alberta electricity grid to match the amount of power used by this event.

How is Bullfrog Power generated?

All of Bullfrog Power's electricity comes from emission-free wind power generation sites here in Alberta that have met Environment Canada's EcoLogo^M standard for renewable power.

Why is being bullfrogpowered important?

Electricity generation is a major industrial source of CO₂ emissions that contribute to climate change, as well as pollutants that contribute to poor air quality. Choosing locally produced green power is an easy way to do your part to address climate change and create a cleaner, healthier environment for your children, your community, and future generations.

Can I switch my home to Bullfrog Power?

Yes. You can make the choice to support green power too, simply by signing up online for Bullfrog Power at bullfrogpower.com.
